The power to heal

Insurance Covers Hyperbarics to Heal

# Radiation Damage

to the Breast and Soft Tissues

**Research confirms that Hyperbaric Oxygen Therapy (HBOT) not only halts ongoing delayed radiation injury to the breast, bone, and soft tissues; it also prevents further post-radiation complications and promotes the growth of healthy new tissues and bones.**

Many people do not know that insurance covers (and hyperbarics heals) not only damage, but also pain and tenderness resulting from radiation. HBOT delivers needed oxygen to oxygen-starved tissues and fights infections, speeding recovery, including flaps, grafts and other surgeries.

**NOW OPEN WEEKENDS**

## HBOT: Based In Research

1. Hyperbaric treatment of delayed radiation injury. Cooper, Jeffrey S, et al, July, 2022.
2. Hyperbaric oxygen and radiation therapy: A review. Fernandez E, et al, Nov, 2020.
3. Hyperbaric oxygen therapy for late Radiation Tissue Injury. Bennett, Michael H, et al, Apr, 2016.

## Benefits Of Hyperbaric Oxygen Therapy

- $O_2$ — Increases tissue oxygenation over 400%
- Salvages and revitalizes breast tissue
- Stimulates stem cell mobilization & reproduction
- Improves blood flow to damaged areas
- Stimulates angiogenesis of radiated beds
- Reduces fibrosis and softens fibrous tissue

## Over 80,000 Treatments In 24 Years!

Our medical staff has been providing physician-prescribed, evidence-based treatment of Medicare- AMA- and FDA-approved conditions for over 24 years.

## We Respond Quickly

We can get urgent patients in for treatment often on the same day you refer them.

## You Refer; We Do the Rest

1. You or our Medical Director write a prescription or authorization for HBOT.
2. We work with insurance to get your patient's treatments pre-approved.
3. We keep you updated on your patient's treatment progress.

## We Increase Your Patients' Satisfaction

Physicians who refer their patients to Bay Area Hyperbarics have more satisfied patients. We have 97% patient satisfaction— among the best in the industry.

## Radiation Damage Diagnoses We Treat

We have treated thousands of patients with delayed radiation damage to the breast and soft tissues, with a 94% success rate, including patients with damage to:

- The breast
- Soft tissues, skin, and bones
- Mouth, neck and head
- Pelvis, abdomen, and sexual organs
- Bladder

HBOT also heals generalized radionecrosis and osteoradionecrosis.

## Evidence-based Protocols

We use only hard-sided hyperbaric chambers. All research into hyperbaric oxygen therapy and approvals by the AMA, FDA, and Medicare, are based on HBOT performed in hard chambers, where patients are pressurized to 2.0 to 2.8 ATA and receive 100% oxygen. Research does not support the use of soft chambers. Soft chambers do not heal radiation damage or other serious conditions, such as non-healing wounds, and are not FDA or Medicare approved.

Our physicians, nurses and technicians follow specific treatment protocols approved by Medicare, the UHMS, and leading peer-reviewed research in the field.
